

陳建豪 Jimmy Chen

DEVOPS / SRE / AI ENGINEER

jimc1682000@gmail.com · github.com/jimc1682000 · linkedin.com/in/594jimmychen · Taipei, Taiwan

A 13-year IT career spanning systems engineering, backend development, and DevOps / SRE. Starting in network and server operations, moving through Java web backend development, and in recent years specializing in large-scale cloud platform operations and automation. Experienced in AWS at scale, Kubernetes, observability, CI/CD, and information security (CEH), and bringing AI / agentic workflows into operations. Full history below.

CORE SKILLS

- **Cloud / AWS:** EC2, S3, Lambda, RDS / Aurora, DynamoDB, Route 53, ECS, EKS, SQS, Bedrock, Personalize, Elemental, Secrets Manager, DevOps Guru
- **Containers / Orchestration:** Docker, Kubernetes, EKS, ECS, Vagrant
- **IaC / CI-CD:** Terraform, Ansible, GitLab CI/CD, Jenkins, GitHub
- **Observability / Logging:** Prometheus, Grafana, ELK (Elasticsearch / Logstash / Kibana / Filebeat / Curator), CloudWatch
- **Messaging / Streaming:** Kafka, Zookeeper, ActiveMQ, RabbitMQ, SQS
- **Databases:** MySQL, PostgreSQL, Aurora, MSSQL, MongoDB, Redis, DynamoDB
- **Backend / Languages:** Java, Python, JavaScript / Node.js, Bash, Spring, Hibernate, ZK, GWT, Django, JMS, GSON, RESTful
- **Systems / Network / Security:** Linux, Windows Server, VMware, Hyper-V, AD, Exchange, WSUS, UTM, TCP/IP, VLAN, VPN, iptables, IIS, IPS, ethical hacking / penetration testing (CEH)
- **Testing / Load:** JMeter, Locust
- **AI / Agentic:** Claude Code, skills / MCP, agentic workflows, RAG / knowledge-base automation, harness guardrails, AWS Bedrock

AI / AGENTIC ENGINEERING

- Led the team's coding-agent toolchain evolution (command → plugin → skill); built reusable knowledge-base and credential-management skills for DevOps / SRE operations
- Built a knowledge-base automation pipeline (raw → distill → semantic search / NotebookLM) integrated with Jira / Notion; shared HITL practices publicly and open-sourced the ai-kb methodology
- Self-host and operate an AI platform (OpenClaw on VPS), bringing agentic workflows into production operations

EXPERIENCE

Staff DevOps Engineer · CATCHPLAY

2024.04 — Present

- **AI collaboration & DevOps toolchain:** led the coding-agent toolchain (command → plugin → skill), shipping reusable knowledge-base and credential skills; co-built an EKS reference environment with guardrails (pre-commit secret scan, PR gates, layered secret scanning); presented HITL practices and the ai-kb methodology to the tech org
- **Streaming media & FAST channel:** built a FAST-channel monitoring platform (weekly reports, real-time alerts, LINE Bot / Slack notifications); integrated AWS Elemental (MediaLive / MediaPackage / MediaTailor), DRM, Global Accelerator, SPEKE, IVS, and Elemental Link; managed MediaLive reservation purchasing and cost
- **Platform modernization & service migration:** sole owner of the GitLab → Gitea migration; built Vaultwarden and rolled out Bitwarden; evaluated and adopted Bruno to replace Postman; fixed the Akamai log server and completed LDS → DataStream 2 IaC; built Serverless Lambda Terraform modules and Jenkins automation
- **Database, cache & deployment automation:** Aurora read replicas, VCS-platform database MySQL → PostgreSQL migration, RDS Proxy for high-concurrency connections, Redis / Valkey 7 split migration; led the Airflow 2.0 upgrade (UAT / Production); developed Jenkins deployment automation in Go (geo-block workflow); designed high-traffic order processing with SQS
- **Cloud governance, security & client projects:** GCP permission tightening and API-key cleanup; client-project environments and CDN network allowlists (Akamai / CloudFront); AI-assisted DRM / WAF / CVE audits; credential cleanup (Secrets Manager); introduced AWS Personalize, DynamoDB, Secrets Manager, and Bedrock
- **System integration & architecture:** built S3 / NAS hybrid storage for video content and S3 lifecycle auto-cleanup; developed Akamai IaC for automated CDN cache management; built a short-link service; built a DynamoDB monitoring dashboard and deployed DevOps Guru
- Tools: AWS (Elemental / EKS / Aurora / RDS Proxy / DynamoDB / SQS / IVS / Personalize / Bedrock / Secrets Manager / DevOps Guru), GCP, Airflow, Gitea, Vaultwarden, Akamai DataStream, Claude Code / skills / MCP, Bruno, Terraform, Kubernetes, Go, PostgreSQL

Senior SRE Engineer · TrendMicro

2021.09 – 2024.03

- Performed multiple disaster-recovery drills and maintenance windows, and responded to a range of incidents (incident response)
- Optimized cloud cost by identifying and removing unused / low-utilization resources, tuning data transfer, and adjusting logging
- Strengthened operations: Opsworks → ASG / SSM migration, end-to-end (E2E) monitoring, and a service readiness review process
- Tools: AWS (Opsworks / ASG / SSM / CloudWatch)

Senior DevOps Engineer · GoFreight

2020.10 – 2021.09

- Containerization: replaced VM dev / stage environments, ran unit tests in the CI/CD pipeline, and improved pipeline performance and reliability

- Built Kubernetes (EKS) for HA and rolling upgrades; built an ELK stack for centralized log management
- Cost: right-sized EC2 instances + RIs; deployed / troubleshot the GoFreight FMS system for customers
- Upgraded MySQL to 8.0, upgraded the DMS engine and fixed DMS tasks, upgraded UTM; added autoscaling Jenkins workers and integrated GitHub
- Tools: Ansible, Terraform, Docker, Node.js, Nginx, ELK, Filebeat, GitHub, Jenkins, AWS, EKS, Redis, Django, Vagrant

Senior DevOps Engineer · CATCHPLAY

2019.02 – 2020.10

- Built a stress-test environment to find system bottlenecks; created a one-click CI/CD pipeline for RDs to deploy across environments; replaced cron jobs and some ETL with Airflow
- Used EC2 Spot and RIs to cut cost; wrote monitoring scripts with Slack alerts; used Lambda to consolidate logs and align load-balancer settings
- Standardized components via containers (multi-layer images); maintained Elasticsearch with Curator and tuned Logstash parsing rules
- Tools: Ansible, Terraform, Docker, ELK, GitLab, Jenkins, AWS, Airflow, RabbitMQ, ECS, Lambda, Locust, JMeter

DevOps Automation Engineer · Groundhog Technologies

2018.09 – 2019.02

- Deployed DSP / DMP (real-time ad bidding) systems to customer environments; built connectivity-monitoring tools between servers; improved performance by removing redundant components / tuning settings
- Introduced Kubernetes, GitLab CI/CD, and Ansible to increase automation; hardened firewall settings and fixed vulnerabilities to raise the security level
- Tools: Docker, Kafka, Zookeeper, ELK, Grafana, Prometheus, Kubernetes, Ansible, GitLab CI/CD, GCP, MongoDB, Redis

Senior Java Web Engineer · Groundhog Technologies

2017.11 – 2018.09

- Maintained and built new features for the CovMo (cellphone signal optimization) system; refactored code for readability; tuned SQL queries for performance
- Tools: Java, JavaScript, GWT, Spring, Tomcat, MySQL

Senior Java Web Engineer · Bank SinoPac

2015.04 – 2017.11

- Gathered user requirements and built, from the ground up, a system digitizing the four core investment-trust workflows (analysis reports, sign-off, order placement & trading, risk control (pre / real-time / post), performance analysis, audit trail); built multiple RESTful web services with ZK, Hibernate, JMS, and GSON
- Tools: Java, ZK, Hibernate, JMS, GSON, Tomcat, ActiveMQ, MSSQL

Senior System Engineer · Gping Construction

2014.03 – 2015.04

- Hardened firewall settings and upgraded network topology; built a backup server with Acronis
- Tools: Windows Server, Acronis, Network Administration

System Engineer · Gobooks Publishing

2012.09 – 2014.03

- Upgraded Windows AD (2000 → 2008) and Exchange (2000 → 2007); ran P2V migrations for legacy systems, built HA with VMware, and set up backup / DR
- Migrated Fortigate → Cyberoam UTM, deployed a Sophos antivirus console, set up WSUS; mitigated a denial-of-service (DoS) attack incident
- Tools: Windows Server, VMware, Hyper-V, Exchange, AD, WSUS, UTM, ERP

SELECTED PROJECTS

- **film-brain** — AI film-library brain — static portfolio: semantic search replay, debugging case study, eval iteration story
- **a-day-with-my-ai-wife** — 我與老婆的一天 — A day debugging Gitea OOM with my AI wife (Claude Code). 14 collaboration tips included.
- **Enlighten by Item (UnionPay Mobile App Contest)** — led a 3-person backend team; shopping experience on UnionPay's payment API + a personality quiz; top-5 finalist · [Demo ↗](#) · [Slides ↗](#)
- **Java Dojo — Refactoring Patterns** — talk on refactoring techniques
- **ZK 101** — introductory tutorial on the ZK framework

CERTIFICATIONS

- **Red Hat:** RHCA · RHCE (EX200 / EX300)
- **Security / Network:** CEH (312-50) · ENSA (312-38) · CCNSP · CCNA (640-802)
- **Microsoft:** MCITP (Windows Server 2008 R2: 70-646 / 640 / 642) · MCSA · MCTS · MOS Master
- **Java:** OCPJP7 (1Z0-803 / 804) · SCJP
- **SRE / Incident:** PagerDuty Incident Responder
- **Other:** International Trade Proficiency Exam · Life Insurance Agent (LIA-ROC)

PROFESSIONAL TRAINING

- **Uniforce** “Network Systems Integration Engineer certification program” (2012.02 — 07): 516 core hours / 626 total hours, graduated 3rd in class
- **Uniforce** “EC-Council CEH ethical hacking course” (2013, 40 hours)
- **PCSCHOOL** “Android app training (incl. OCPJP)” (2013 — 14, 264 hours)
- **PCSCHOOL** “OCPJWCD (formerly SCWCD)” (2014, 48 hours)

EDUCATION

- **Soochow University** — B.B.A., International Trade (2007 — 2012); VP of the Motor Vehicle Club, Aikido Club, group leader in the Young Leaders program
- **Tainan First Senior High School** — Science track (2004 — 2007); Computer Club

LANGUAGES

- Chinese (native) · Taiwanese (fluent) · English (professional working proficiency · TOEIC 845) · Japanese (basic)
