

陳建豪 Jimmy Chen

SENIOR PLATFORM ENGINEER

jimc1682000@gmail.com · github.com/jimc1682000 · linkedin.com/in/594jimmychen · jimc1682000.blogspot.com ·

Taipei / Tainan

13 years across IT infrastructure and cloud platforms. Linux systems administration (RHCE), KVM/VMware virtualisation, and HAProxy HA architecture — extending into large-scale Kubernetes/EKS platform engineering. Deploys infrastructure automation with Ansible / Terraform / Go, and brings hands-on SRE depth in incident response, DR drills, and full-stack observability with Prometheus / Grafana / ELK.

CORE SKILLS

Linux systems × virtualisation × cloud platforms — full-stack infrastructure from bare-metal to Kubernetes

Core strengths : Linux / virtualisation · HA / DR architecture · IaC automation

- **Linux / Virtualisation** : Linux · RHCE (cert) · KVM / QEMU · VMware · Bash · Docker · yum / RPM
- **HA / Reliability** : HAProxy · DR / failover drills · Incident response · NFS · HA architecture
- **Networking / Systems** : pfSense / Firewall · BIND DNS · TCP/IP · VPN · iptables
- **IaC / Automation** : Ansible · Terraform · Chef · Go · Python · Jenkins
- **Observability** : Prometheus · Grafana · ELK · CloudWatch
- **Cloud / K8s** : AWS (deep) · Kubernetes · EKS · ECS · GCP

IMPACT HIGHLIGHTS

- Self-built a full OKD 4.4 (OpenShift upstream) cluster (two physical KVM/QEMU hosts, HAProxy / BIND / NFS / pfSense end-to-end)
- Sole owner of the GitLab → Gitea migration: hundreds of repos, the whole engineering org, < 2h off-peak cutover
- Built a ~30-channel event-driven FAST monitoring platform (CloudWatch → SNS → Lambda, Terraform IaC)
- Led the Airflow 1.x → 2.0 upgrade (UAT + Production, carrying ~180 DAGs)
- Cloud cost optimization: EC2 RIs / Fargate Spot ~20% each, MediaLive Reservations ~50%

PLATFORM ENGINEERING CORE COMPETENCIES

- **Virtualisation / HA**: KVM/QEMU OKD 4.4 full cluster (HAProxy / BIND / NFS / pfSense); VMware vSphere HA + P2V migrations; HAProxy multi-backend load balancing; EKS rolling upgrades; Aurora Read Replica + RDS Proxy HA; multiple DR drills at TrendMicro
- **Linux / Networking / Storage**: RHCE certified; yum server for centralised RPM; Kubernetes node-level cgroup / namespace; FCOS ignition; pfSense DHCP/NAT/Firewall; BIND DNS; NFS persistent storage; iptables / VPN
- **Automation / IaC**: Ansible (DSP/DMP deployments, OKD4 playbooks, Kubernetes + Gitea / Jenkins); Terraform (Lambda modules, EKS infra, Akamai DataStream 2, multiple AWS services); Go / Bash (Geo-block automation, yum/RPM scripts, OKD4 bootstrap)
- **Observability**: FAST-channel monitoring (LINE Bot / Slack; weekly reports + alert heatmaps); DynamoDB dashboard + DevOps Guru anomaly detection; centralised ELK logging; end-to-end (E2E) monitoring
- **Incident Response / SRE**: cross-service incident response at TrendMicro; Service Readiness Review; multiple DR drills / resilience tests; pre-commit / PR-gate guardrails

EXPERIENCE

Staff DevOps Engineer · CATCHPLAY

2024.04 — Present

- Built an EKS reference environment with Ansible + Terraform; deployed guardrails (pre-commit secret scan, PR gates, layered secret scanning)
- Built a ~30-channel event-driven FAST monitoring platform (CloudWatch → SNS → Lambda → Slack / LINE, heatmaps, automated weekly reports, Terraform IaC); added DynamoDB dashboard + DevOps Guru
- Re-architected HA database layer: Aurora read replicas, MySQL / PostgreSQL parallel operation, RDS Proxy (bursts of thousands of connections), Redis 5 → Valkey 7 upgrade (cost + EOL, some legacy systems retained); led Airflow 1.x → 2.0 upgrade (UAT + Production, ~180 DAGs)
- Sole owner of GitLab → Gitea migration (hundreds of repos, the whole engineering org, < 2h off-peak cutover); built serverless Lambda Terraform modules and Jenkins automation; developed Geo-block deployment in Go
- Used SQS to handle high-volume telco partner orders
- Integrated AWS Elemental streaming (DRM, Global Accelerator, SPEKE, IVS); migrated Akamai LDS → DataStream 2 via IaC
- Multi-cloud governance: GCP permission hardening, Secrets Manager cleanup, WAF / CVE audits; audited and removed idle EC2 snapshots

Senior SRE Engineer · TrendMicro

2021.09 – 2024.03

- Owned cross-service incident response; ran regular DR drills / resilience tests (every six months to quarterly, 5–6+ over tenure) and maintenance windows
- Built end-to-end (E2E) monitoring and a Service Readiness Review process
- Drove Opsworks → ASG / SSM migration; audited and decommissioned idle resources

Senior DevOps Engineer · GoFreight

2020.10 – 2021.09

- Built EKS for high availability and rolling upgrades; replaced dev / stage environments with containers
- Introduced centralised ELK logging; added autoscaling Jenkins workers for peak load
- Cut cost with EC2 RIs / right-sizing; upgraded MySQL 5.6 → 8.0 and the DMS engine

Senior DevOps Engineer · CATCHPLAY

2019.02 – 2020.10

- Built a one-click CI/CD pipeline for multi-environment deployment
- Set up load-test environments (Locust / JMeter) to locate performance bottlenecks
- Replaced cron jobs with Airflow scheduling; refactored part of the ETL automation
- Centralised log management with ELK + Curator; tuned Logstash parsing rules

Senior Java / DevOps Engineer · Groundhog Tech

2017.11 – 2019.02

- Deployed DSP / DMP container images to customer Linux environments with Ansible
- Introduced Kubernetes and GitLab CI/CD; hardened system performance and security

Senior Java Web Engineer · Bank SinoPac

2015.04 – 2017.11

- Built an investment-workflow system and RESTful web services from scratch (Java backend)

Senior System Engineer · Gping Construction

2014.03 – 2015.04

- Designed and hardened enterprise firewall rules and network topology (routing, VLAN, NAT)
- Built backup/recovery with Acronis; managed Windows Server infrastructure

System Engineer · Gobooks Publishing

2012.09 – 2014.03

- Built VMware vSphere HA environment (VM clustering) and performed P2V migrations
- Upgraded Windows AD (2000 → 2008) and Exchange; deployed WSUS for centralised patch management

SELECTED PROJECTS

- [film-brain](#)
- [a-day-with-my-ai-wife](#)
- [OKD4 Home Lab](#) — Bare-metal OKD 4.4 (OpenShift upstream) on two physical KVM/QEMU hosts; self-built pfSense / HAProxy / BIND / NFS / FCOS cluster end-to-end · [Config Files](#) ↗
- [CDN Traffic Report](#) — Browser-automation scraper for Akamai Control Center SPA + AWS CloudFront traffic data; also a Claude Code Plugin for AI-agent-driven weekly reporting · [GitHub](#) ↗

- **Enlighten by Item (UnionPay Mobile App Contest)** — led a 3–person backend team; shopping experience on UnionPay’s payment API + a personality quiz; top–5 finalist · [Demo](#) ↗
- **Java Dojo — Refactoring Patterns** — talk on refactoring techniques
- **ZK 101** — introductory tutorial on the ZK framework

EDUCATION, CERTIFICATIONS & LANGUAGES

- **Education:** Soochow University, B.A. (2007 — 2012) · Tainan First Senior High School (2004 — 2007)
- **Certifications:** RHCE · CEH · OCPJP7 · MCITP · CCNA
- **Languages:** Chinese (native) · English (professional working proficiency · TOEIC 845)
