

陳建豪 Jimmy Chen

SRE / DEVOPS ENGINEER

jimc1682000@gmail.com · github.com/jimc1682000 · linkedin.com/in/594jimmychen · jimc1682000.blogspot.com ·

Taipei / Tainan

13 years across IT infrastructure and backend development, 5+ years focused on DevOps / SRE, centered on the Kubernetes platform lifecycle, observability, and system reliability. I combine backend development (Java / Python) with large-scale cloud platform architecture and operations, and am experienced in incident response, disaster-recovery / resilience drills, and design / readiness reviews — while bringing AI / agentic workflows into operational automation.

CORE SKILLS

Kubernetes platforms × reliability engineering — from observability to incident response

Core strengths : K8s / EKS platforms · Observability & reliability · Incident response

- **Kubernetes / Platform** : Kubernetes · Networking / storage · EKS · Controllers · Docker · ECS
- **Observability** : Prometheus · Grafana · ELK · CloudWatch · DevOps Guru
- **Reliability / SRE** : Incident response · DR / resilience drills · Readiness review · High-concurrency tuning
- **IaC / CI-CD** : Terraform · Gitea · Jenkins · Ansible · Chef · Go
- **Languages / Backend** : Java · Python · JavaScript · Bash · Go
- **Databases** : MySQL · PostgreSQL · Aurora · DynamoDB · Redis · MongoDB
- **AI / Agentic** : Claude Code · Skills / MCP · Agentic workflows · Knowledge-base automation · CI/CD guardrails

IMPACT HIGHLIGHTS

- Regular DR / resilience drills at TrendMicro (every six months to quarterly, 5–6+ over tenure) across multiple core services
- Led the Airflow 1.x → 2.0 upgrade (UAT + Production, carrying ~180 DAGs)
- Built a ~30-channel event-driven FAST monitoring platform (CloudWatch → SNS → Lambda → Slack / LINE, Terraform IaC)
- High concurrency / scale: RDS Proxy absorbing bursts of thousands of connections, Aurora read replicas, SQS for high-volume orders
- Cloud cost optimization: EC2 RIs / Fargate Spot ~20% each, MediaLive Reservations ~50%

SRE / RELIABILITY CORE COMPETENCIES

- **Kubernetes platform**: built an EKS reference environment with rolling upgrades; standardized deployment with Kubernetes, Ansible, Gitea / Jenkins
- **Observability**: FAST-channel monitoring platform, DynamoDB dashboard + DevOps Guru anomaly detection, centralized ELK logging, end-to-end (E2E) monitoring
- **Reliability / SRE**: cross-service incident response, multiple DR / resilience drills, service readiness reviews; pre-commit / PR-gate guardrails in production workflows
- **High concurrency / scale**: RDS Proxy absorbing bursts of thousands of connections, Aurora read replicas, Redis 5 → Valkey 7 upgrade, SQS for a major telco partner's high-volume orders
- Led the team's coding-agent toolchain evolution (command → plugin → skill); built knowledge-base and account & secrets management skills for DevOps / SRE automation
- Built a knowledge-base automation pipeline (raw → distill → semantic search) integrated with Jira / Notion to speed up incident analysis and documentation

EXPERIENCE

Staff DevOps Engineer · CATCHPLAY

2024.04 — Present

- Built a ~30-channel event-driven FAST monitoring platform (CloudWatch → SNS → Lambda → Slack / LINE, alert heatmaps, automated weekly reports, Terraform IaC); strengthened observability with a DynamoDB dashboard and DevOps Guru
- Co-built an EKS reference environment with AI-assisted guardrails (pre-commit secret scan, PR gates, layered secret scanning)
- Re-architected the data layer: Aurora read replicas, MySQL / PostgreSQL parallel operation, RDS Proxy (bursts of thousands of connections), Redis 5 → Valkey 7 upgrade (cost + EOL, some legacy systems retained); led the Airflow 1.x → 2.0 upgrade (UAT + Production, ~180 DAGs)
- Sole owner of the GitLab → Gitea migration (hundreds of repos, the whole engineering org, < 2h off-peak cutover); built Serverless Lambda Terraform modules and Jenkins automation; developed geo-block deployment automation in Go
- Used SQS to handle a major telco partner's high-volume order throughput
- Integrated AWS Elemental streaming (DRM, Global Accelerator, SPEKE, IVS); migrated Akamai LDS → DataStream 2 via IaC
- Multi-cloud governance and security: GCP permission tightening, Secrets Manager credential cleanup, DRM / WAF / CVE audits; audited and cleaned up idle EC2 snapshots; client-project environments and CDN network allowlists

Senior SRE Engineer · TrendMicro

2021.09 — 2024.03

- Owned cross-service incident response; ran regular disaster-recovery drills (resilience testing, every six months to quarterly, 5–6+ over tenure across multiple core services) and maintenance windows
- Built end-to-end (E2E) monitoring and established a service readiness review process
- Drove the Opsworks → ASG / SSM migration; audited and decommissioned idle resources to cut cloud cost and tune logging

Senior DevOps Engineer · GoFreight

2020.10 — 2021.09

- Built EKS (Kubernetes) for high availability and rolling upgrades; replaced dev / stage environments with containers
- Introduced ELK for centralized logging; ran unit tests in the CI/CD pipeline to improve reliability
- Cut cost with EC2 RIs / right-sizing; upgraded MySQL 5.6 → 8.0 and upgraded the DMS engine
- Added autoscaling Jenkins workers for peak load

Senior DevOps Engineer · CATCHPLAY

2019.02 — 2020.10

- Created a one-click CI/CD pipeline for multi-environment deployment; built a stress-test environment (Locust / JMeter) to locate performance bottlenecks
- Replaced cron jobs with Airflow scheduling; refactored part of the ETL automation
- Standardized components via containers (multi-layer images)
- Centralized log management with ELK + Curator; tuned Logstash parsing rules
- Cut cloud cost with EC2 Spot / RIs; consolidated multi-source logs with Lambda

Senior Java / DevOps Engineer · Groundhog Tech

2017.11 — 2019.02

- Introduced Kubernetes, Ansible, and GitLab CI/CD; deployed DSP / DMP systems with improved performance and security
- Maintained and extended the CovMo signal-optimization system; refactored code and tuned SQL queries

Senior Java Web Engineer · Bank SinoPac

2015.04 — 2017.11

- Gathered user requirements and built an investment-workflow system and RESTful web services from scratch (Java backend)

Earlier Experience

2012 — 2015

- **Gping Construction · Senior System Engineer** (2014.03 — 2015.04): hardened firewall and network topology; built backup with Acronis

- **Gobooks Publishing · System Engineer** (2012.09 — 2014.03): upgraded Windows AD / Exchange; built HA with VMware

SELECTED PROJECTS

- **film-brain**
- **a-day-with-my-ai-wife**
- **OKD4 Home Lab** — Bare-metal OKD 4.4 (OpenShift upstream) on two physical KVM/QEMU hosts; self-built pfSense / HAProxy / BIND / NFS / FCOS cluster end-to-end · [Config Files ↗](#)
- **CDN Traffic Report** — Browser-automation scraper for Akamai Control Center SPA + AWS CloudFront traffic data; also a Claude Code Plugin for AI-agent-driven weekly reporting · [GitHub ↗](#)
- **Enlighten by Item (UnionPay Mobile App Contest)** — led a 3-person backend team; shopping experience on UnionPay's payment API + a personality quiz; top-5 finalist · [Demo ↗](#)
- **Java Dojo — Refactoring Patterns** — talk on refactoring techniques
- **ZK 101** — introductory tutorial on the ZK framework

EDUCATION, CERTIFICATIONS & LANGUAGES

- **Education:** Soochow University, B.A. (2007 — 2012) · Tainan First Senior High School (2004 — 2007)
- **Certifications:** RHCE · CEH · OCPJP7 · MCITP · CCNA
- **Languages:** Chinese (native) · English (professional working proficiency · TOEIC 845)
