

陳建豪 Jimmy Chen

AI ENGINEER · DEVOPS / SRE

jimc1682000@gmail.com · github.com/jimc1682000 · linkedin.com/in/594jimmychen · jimc1682000.blogspot.com ·

Taipei / Tainan

13 years of cloud / DevOps / SRE foundations, recently focused on AI / agentic engineering — self-hosting an AI platform, building Claude Code skills and agentic workflows, and knowledge-base automation — bringing AI into production and operations on the back of deep AWS operations and automation experience.

CORE SKILLS

AI agent engineering × large-scale cloud ops — shipping automation into production

Core strengths : AI agent toolchain · Deep AWS operations · EKS platform engineering

- **AI / Agentic** : Claude Code 、Skills / MCP 、CI/CD guardrails 、Agentic workflows 、RAG / knowledge base 、AWS Bedrock
- **Cloud / Platform** : AWS (deep) 、EKS 、GCP 、Kubernetes 、Docker 、ECS
- **IaC / CI-CD** : Terraform 、Ansible 、Chef 、Gitea 、Jenkins 、Go
- **Observability** : Prometheus 、Grafana 、ELK 、CloudWatch 、DevOps Guru
- **Languages / Backend** : Go 、Python 、Java 、JavaScript 、Bash
- **Databases** : MySQL 、PostgreSQL 、Aurora 、DynamoDB 、MongoDB 、Redis

IMPACT HIGHLIGHTS

- Led the team coding-agent toolchain, shipping 5 shared skills (adopted org-wide in DevOps, bw rolling out to the Tech team)
- Self-hosted / open-weight LLM inference evaluation (open-weight MoE on AWS GPU EC2) + an LLM-as-judge eval loop (film-brain nDCG@5 0.93 → 0.96)
- Sole owner of the GitLab → Gitea migration: hundreds of repos, the whole engineering org, < 2h off-peak cutover
- Cloud cost optimization: EC2 RIs / Fargate Spot ~20% each, MediaLive Reservations ~50%
- Built a ~30-channel event-driven FAST monitoring platform (Terraform IaC)

AI / AGENTIC ENGINEERING

- Led the team's coding-agent toolchain evolution (command → plugin → skill); built reusable knowledge-base and account & secrets management skills for DevOps / SRE operations
- Built a knowledge-base automation pipeline (raw → digest → semantic search / NotebookLM) integrated with Jira / Notion; shared HITL practices publicly and open-sourced the ai-kb methodology
- Self-host and operate an AI platform (OpenClaw on VPS), bringing agentic workflows into production operations
- Self-hosted / open-weight LLM inference evaluation: assessed larger open-weight MoE models (gemma-4-26B-A4B-it, Qwen3.6-35B-A3B) on AWS GPU EC2 as self-hosting candidates; separately ran query expansion + an LLM-as-judge eval pipeline via Ollama on no-GPU hardware (model selection MoE 35B → 8B dense @ NPU, with inference-infra fixes — streaming cancel, retry warmup, output budget)
- Business foundation × AI-agent governance: a management lens on multi-agent orchestration and ops decisions — guardrails ≈ accountability controls, scoped authorization ≈ delegation, harness / loop ≈ organizational design

EXPERIENCE

Staff DevOps Engineer · CATCHPLAY

2024.04 — Present

- Led the team's coding-agent toolchain (command → plugin → skill), shipping reusable knowledge-base and account & secrets management skills; co-built an EKS reference environment with AI-assisted guardrails (pre-commit secret scan, PR gates, layered secret scanning); member of the ai-squad (a Tech-Lead-formed AI initiative)
- Sole owner of the GitLab → Gitea migration (hundreds of repos, the whole engineering org, < 2h off-peak cutover); built Vaultwarden and rolled out Bitwarden; evaluated and adopted Bruno to replace Postman
- Built a ~30-channel event-driven FAST monitoring platform (CloudWatch → SNS → Lambda → Slack / LINE, alert heatmaps, automated weekly reports, Terraform IaC)
- Integrated AWS Elemental streaming (MediaLive / MediaPackage / MediaTailor, DRM, Global Accelerator, SPEKE, IVS)
- Built reusable Serverless Lambda Terraform modules and Jenkins automation; developed Jenkins deployment automation in Go (geo-block workflow)
- Re-architected the data layer: Aurora read replicas, MySQL / PostgreSQL parallel operation, RDS Proxy (absorbing bursts of thousands of simultaneous connections), Redis 5 → Valkey 7 upgrade (cost + EOL, some legacy systems retained); led the Airflow 1.x → 2.0 upgrade (UAT + Production, ~180 DAGs)
- Built a DynamoDB monitoring dashboard and adopted DevOps Guru
- Multi-cloud governance and security: GCP permission tightening and API-key cleanup; AI-assisted DRM / WAF / CVE audits; Akamai LDS → DataStream 2 IaC; audited and cleaned up idle EC2 snapshots; client-project environments and CDN network allowlists
- Used SQS to handle a major telco partner's high-volume orders
- Evaluated and rolled out AWS Bedrock, Secrets Manager, and Personalize; designed S3 + NAS hybrid storage and Akamai IaC CDN automation

Senior SRE Engineer · TrendMicro

2021.09 — 2024.03

- Ran multiple disaster-recovery drills and maintenance windows, and owned cross-service incident response
- Optimized cloud cost by auditing and decommissioning idle / low-utilization resources, and tuned data transfer and logging
- Drove the Opsworks → ASG / SSM migration, built end-to-end (E2E) monitoring, and established a service readiness review process

Senior DevOps Engineer · GoFreight

2020.10 — 2021.09

- Replaced dev / stage environments with containers and ran unit tests in the CI/CD pipeline to improve reliability
- Built EKS for high availability and rolling upgrades; introduced ELK for centralized log management
- Cut cost with EC2 RIs / right-sized instances; upgraded MySQL 5.6 to 8.0 and the DMS engine
- Added autoscaling Jenkins workers for peak load

Senior DevOps Engineer · CATCHPLAY

2019.02 — 2020.10

- Created a one-click CI/CD pipeline for multi-environment deployment; built a stress-test environment to locate performance bottlenecks
- Replaced cron jobs with Airflow scheduling; refactored part of the ETL automation
- Cut cloud cost with EC2 Spot / RIs; consolidated multi-source logs with Lambda
- Standardized components via containers; managed log parsing with ELK + Curator

Senior Java / DevOps Engineer · Groundhog Tech

2017.11 — 2019.02

- Deployed DSP / DMP systems and tuned performance; introduced Kubernetes, Ansible, and GitLab CI/CD to strengthen automation
- Audited firewall settings to improve system security
- Maintained and extended the CovMo signal-optimization system; refactored code and tuned SQL queries

Early Career

2012 — 2017

- **Bank SinoPac · Senior Java Web Engineer** (2015 — 2017): built an investment–workflow system and RESTful web services from the ground up (Java backend)
- **Gping Construction / Gobooks Publishing · System Engineer** (2012 — 2015): firewall & network topology, Acronis backup, Windows AD / Exchange upgrades, VMware HA + P2V, WSUS

SELECTED PROJECTS

- **film–brain**
- **a–day–with–my–ai–wife**
- **OKD4 Home Lab** — Bare–metal OKD 4.4 (OpenShift upstream) on two physical KVM/QEMU hosts; self–built pfSense / HAProxy / BIND / NFS / FCOS cluster end–to–end · [Config Files ↗](#)
- **CDN Traffic Report** — Browser–automation scraper for Akamai Control Center SPA + AWS CloudFront traffic data; also a Claude Code Plugin for AI–agent–driven weekly reporting · [GitHub ↗](#)
- **Enlighten by Item (UnionPay Mobile App Contest)** — led a 3–person backend team; shopping experience on UnionPay’s payment API + a personality quiz; top–5 finalist · [Demo ↗](#)
- **Java Dojo — Refactoring Patterns** — talk on refactoring techniques
- **ZK 101** — introductory tutorial on the ZK framework

EDUCATION, CERTIFICATIONS & LANGUAGES

- **Education:** Soochow University, B.A. (2007 — 2012) · Tainan First Senior High School (2004 — 2007)
- **Certifications:** RHCE · CEH · OCPJP7 · MCITP · CCNA
- **Languages:** Chinese (native) · English (professional working proficiency · TOEIC 845)
